

ASDIS at a glance

ASDIS Software GmbH offers solutions for managing the IT infrastructure in complex IT environments. These custom solutions are based on the company's own standard products. They permit the automated distribution and management of software and data in enterprise-wide IT environments when changes have to be made.

The company has almost 20 years of experience in the development of high-quality software management solutions. Customers of many years' standing such as UBS, Dresdner Bank, Deutsche Bahn (the German rail company), the Müller drugstore chain, the German Foreign Office and other prestigious companies and organizations are a testament to the reliability and efficiency of ASDIS solutions.

Watertight security for demanding requirements

ASDIS ATM/Kiosk Management is the automated software and system configuration management solution for ATMs and kiosk systems, offering the proven benefits of ASDIS:

A wide variety of deployment options to suit your individual requirements

Irrespective of the ATMs, kiosks or other self-service systems you are using, we will come up with a solution to meet your requirements. ASDIS ATM/Kiosk Management ensures that devices are kept available, and it updates data stored locally (e.g. local advertising) and monitors and updates the software on your devices.

Satisfied customers

Our many satisfied customers are persuasive evidence of the flexibility and reliability of ASDIS ATM/Kiosk Management – as is our 28% market share of the ATM management market in Germany, which makes us a market leader in this sector.

Central control and platform independence

ASDIS ATM/Kiosk Management provides central control on all widely used operating systems – across all systems, platforms and versions.

Reliable monitoring and modular inventorying

ASDIS monitors and inventories your hardware and software reliably based on standards. All kinds of other information can be obtained through further inventory modules – depending entirely on your requirements.

ASP/SaaS-ready

Like the other ASDIS solutions, ASDIS Server Management is designed to allow application server providers and SaaS providers to work with it easily and thus broaden their portfolio. IT departments benefit from this because it facilitates planning and cost control and gives them an attractive package of services.

Ideal for large-scale IT infrastructures and meeting high demands

ASDIS manages systems efficiently, monitoring the installed software and installing patches and updates quickly and reliably. It distributes and activates content for advertising or marketing activities individually and cost-effectively, enabling changes to be made as often as necessary. Journals and logs produced on the machines are made available centrally for the purpose of diagnostics or analysis – either on a regular basis or on request. Device availability is thus ensured, even when changes are made frequently, in a wide variety of environments, regardless of their scale.

Overview of the functions of ASDIS ATM/Kiosk Management:

- *Initial installation and crash recovery*
- *Reliable updating of system software and applications*
- *Version-based distribution and activation of all data*
- *Individual configuration of software and data of all kinds*
- *Auditable, concurrent execution of actions of all kinds*
- *Controlled uploading of files of all kinds (logs, data)*
- *Inventoring of all hardware and software*
- *Monitoring of XFS-specific components*
