

ASDIS Software GmbH offers solutions for managing the IT infrastructure in complex IT environments. These custom solutions are based on the company's own standard products. They permit the automated distribution and management of software and data in enterprise-wide IT environments when changes have to be made.

The company has almost 20 years of experience in the development of high-quality software management solutions. Customers of many years' standing such as UBS, Dresdner Bank, Deutsche Bahn (the German rail company), the Müller drugstore chain, the German Foreign Office and other prestigious companies and organizations are a testament to the reliability and efficiency of ASDIS solutions.

Ensuring system availability cost-effectively

ASDIS Retail System Management is the automated software and system configuration management solution for retail systems, offering the proven benefits of ASDIS:

Wide variety of deployment options to suit your individual requirements

Irrespective of the POS or retail systems you are using, we will come up with a solution to meet your requirements. ASDIS Retail System Management ensures that devices are kept available and monitors the hardware and updates the software of your POS systems and other mobile devices (MDE devices).

Minimal requirements in terms of hardware and infrastructure

The lean software design of ASDIS Agent ensures system resource utilization is kept to an absolute minimum. The time at which data is transferred and the bandwidth used can be controlled, thus ensuring your system remains constantly accessible to other applications.

Independent of operating systems and hardware vendors

ASDIS Retail System Management facilitates central control for all widely used device models and operating systems – across all systems, platforms and versions.

Reliable monitoring and modular inventorying

ASDIS monitors and inventories your devices and software reliably based on standards. All kinds of information can be obtained through further inventory modules – depending entirely on your requirements.

Cost-efficient and easy to use: a single system for all kinds of device

All kinds of computers and peripherals can be managed centrally and uniformly using ASDIS – whether they are POS systems, barcode scanners, empties machines, information terminals or PCs. You thus reduce administration effort and costs.

ASP/SaaS-ready

Like the other ASDIS solutions, ASDIS Server Management is designed to allow application server providers and SaaS providers to work with it easily and thus broaden their portfolio. IT departments benefit from this because it facilitates planning and cost control and gives them an attractive package of services.

Ideal for large-scale IT infrastructures and demanding challenges

ASDIS manages systems efficiently, monitoring the installed software and installing patches and updates quickly and reliably. Configuration can be carried out device- or site-specifically, and data transfer can be managed. ASDIS makes the logs produced on the retail systems available centrally for the purpose of diagnostics or analysis – either on a regular basis or on request. This ensures smooth operation and reduces service costs because fewer site visits are required.

Overview of the functions of ASDIS Retail System Management:

- *Client/server architecture*
- *Web-based user interface for central administration*
- *Inventorying of all hardware and software*
- *Configurable monitoring and alerting*
- *Optimized transfer technologies for low bandwidths*
- *Flexibility for integration into existing structures*
- *Availability for Windows and Linux systems*
