

Press release

## Unlimited security for ATMs

### **Euronet Worldwide chooses ASDIS software throughout Europe**

**Berlin, October 06, 2009. Euronet Worldwide and ASDIS, two specialists in the field of banking solutions, are working together to expand in Europe. As the first step in this cooperative venture, Euronet, the industry leader in the processing of secure electronic financial transactions, is equipping its network of ATMs in the Ukraine with ASDIS software. The operation will soon be extended to other European countries.**

The ASDIS ATM Management Solution automates software and system configuration management for ATMs and kiosk systems. "We have been successfully using ASDIS Client for ATMs for years in the German-speaking world. It meets the most exacting requirements in terms of security and stability. That is why we have also chosen ASDIS for the implementation of the solution in the non German-speaking European countries," explains Susanne Rodeck, an executive management member of Euronet Services GmbH. She describes the **go-live** of the Ukrainian ATM network which consists of almost 200 self-service machines as a "**milestone** on our path toward **internationalization** and **standardization**." ATMs in Poland and the Czech Republic are due to be equipped with ASDIS software in the near future.

Another advantage of the ASDIS ATM Management Solution: Minimal manpower is required for the administration of the network of ATMs in the various countries of Europe. "For example, a single **remote** administrator can send bugfixes to the machines or retrieve information from an ATM," says Rodeck. The highest possible levels of security and machine uptime are guaranteed even in remote mode.

"We have been working together successfully with Euronet for many years. The current expansion of our cooperation with Euronet Worldwide in Europe demonstrates that we are a reliable partner which can offer optimum service even when called on to perform **demanding tasks** in **heterogeneous IT environments**, says ASDIS' CEO Petra-Maria Grohs-Frihs.

### **Overview of ATM/Kiosk management**

- Automated distribution and activation of advertising
- Local and central error detection and troubleshooting
- Current device status (e.g. POS terminal cash levels, printer cartridge ink levels etc.)
- Flexible integration with existing software
- Extremely resource-friendly
- Automatic collection of inventory data (printer serial numbers, types/models, etc.)

### **About ASDIS**

ASDIS Software GmbH offers solutions for the efficient management of IT infrastructures in complex IT environments. These custom systems are based on product modules developed by ASDIS that permit the automated distribution and management of system status information, software and data in enterprise-wide IT environments when changes have to be made. A variety of interfaces and flexible software design allow ASDIS solutions to be implemented quickly in existing systems. The company has almost 20 years of experience developing high-quality software management solutions and boasts Fortune 1000 companies among its long-standing customers, which is a testament to the reliability and efficiency of ASDIS solutions. The German Foreign Office, Deutsche Bahn, Dresdner Bank, Drogeriekette Müller and UBS are all ASDIS users, as are numerous other well-known companies, organizations and public agencies. The company is headquartered in Berlin. For more information visit [www.asdis.de](http://www.asdis.de).
